Ouestion 9.3.9

The probability that a bulb produced by a factory will fuse after 150 days of use is 0.05. Find the probability that out of 5 such bulbs

- 1) none
- 2) not more than one
- 3) more than one
- 4) at least one

will fuse after 150 days of use.

Solution:

Guassian:

Let X be a binomial Random variable with parameters n and p such that

$$n = 5 \tag{1}$$

$$p = 0.05 \tag{2}$$

The Mean and Varience of X are

$$\mu = n \times p \tag{3}$$

$$= 0.25$$
 (4)

$$\sigma^2 = n \times p \times (1 - p) \tag{5}$$

$$= 0.2375$$
 (6)

Let Z be a random variable with $\mu = 0$ and $\sigma^2 = 1$

$$Z = \frac{X - \mu + 0.5}{\sigma} \tag{7}$$

0.5 is correctional term

We can calculate the distribution of Z by assuming it be a set of discrete points on the Normal-Distribution f(x)

$$f(x) = \frac{1}{\sqrt{2\pi}} \times e^{-\frac{x^2}{2}}$$
 (8)

(9)

The Q-function from the Normal-Distribution

$$O(x) = \Pr(Z > x) \tag{10}$$

$$= \int_{-\pi}^{\infty} \frac{1}{\sqrt{2\pi}} \times e^{-\frac{x^2}{2}} \tag{11}$$

Binomial:

$$\Pr(X = k) = {}^{n}C_{k}p^{k}(1 - p)^{n-k}$$
(12)

$$= {}^{5}C_{k} (0.05)^{k} (0.95)^{5-k}$$
 (13)

CDF of X

$$F_X(k) = \Pr(X \le k) \tag{14}$$

$$= \sum_{i=0}^{k} {}^{10}C_i (0.05)^i (0.95)^{5-i}$$
 (15)

1) none defective

a) By Gaussian,

$$Pr(X = 0) = Pr(Z > -0.5298)$$
 (16)

$$\approx 0.6960 \tag{17}$$

1

b) By Binomial

$$Pr(X = 0) = {}^{5}C_{0}(0.05)^{0}(0.95)^{5}$$
 (18)

$$= 0.773$$
 (19)

- 2) not more than one defective
 - a) By Gaussian,

$$Pr(X \le 1) \approx Pr(Z > 1.53896)$$
 (20)

$$\approx 0.9948\tag{21}$$

b) By Binomial

$$\Pr(X \le 1) = \sum_{k=0}^{1} {}^{5}C_{k} (0.05)^{k} (0.95)^{5-k}$$
 (22)

$$= 0.9774075$$
 (23)

- 3) more than one defective
 - a) By Gaussian,

$$Pr(X > 1) = 1 - Pr(X \le 1)$$
 (24)

$$= 1 - 0.994$$
 (25)

$$= 0.006$$
 (26)

b) By Binomial

$$Pr(X > 1) = 1 - Pr(X \le 1)$$
 (27)

$$= 1 - 0.9774075 \tag{28}$$

$$=0.0226$$
 (29)

4) atleast one defective

a) By Gaussian,

$$Pr(X \ge 1) = 1 - Pr(X = 0)$$
 (30)

$$= 1 - 0.6960$$
 (31)

$$= 0.304$$
 (32)

b) By Binomial

$$Pr(X \ge 1) = 1 - Pr(X = 0)$$
 (33)

$$= 1 - 0.773 \tag{34}$$

$$= 0.227$$
 (35)

The graph
